Step 11 — In Minecraft

Goal: build the structure and play the music.

1. Start Minecraft and open the world. Its resource pack is **loaded automatically** — nothing to enable in the pack menu.
2. In the chat, click **[Build at …]**, or type:

   `/function music:build` (you must be an operator / have cheats enabled). The chunks are loaded, then the structure is built.

3. Click **[Start the music]**, press the **Play** button of the console, or type:

   `/function music:play`

All the commands

Command	Effect
`/function music:play`	play / resume
`/function music:pause`	pause
`/function music:stop`	stop and clean up
`/function music:restart`	start again
`/function music:volume {v:150}`	volume from 10 to 500 %
`/function music:tempo {bpm:140}`	tempo
`/function music:pitch {st:-2}`	pitch in semitones (−24 to 24)
`/function music:speed {pct:-5}`	speed in % (−90 to 300)
`/function music:seek {s:30}`	go to 30 seconds
`/function music:lanes`	listen to each lane (clickable list)
`/function music:status` / `help`	current settings / clickable help

Command	Effect
`/function music:remove`	remove the structure (asks for confirmation)
`/function music:uninstall`	remove the datapack's scoreboards

Players who are not operators use `/trigger music.play`, `/trigger music.pause`, `/trigger music.stop`, `/trigger music.volume set 150` (same for `tempo`, `pitch`, `speed`).

The **button console** in front of the structure does the same: play, pause, stop, volume, tempo, pitch.

> A literal `/play music` command is impossible in vanilla Minecraft without a mod: the music is controlled with datapack functions.

Next guide: free and full editions.
