Step 2 — First settings

Goal: choose the language and check where the sounds come from (usually nothing to change).

Open the **Settings** page from the left menu.

The settings page

Language

1. In **Language**, choose **English** or **Français**.
2. Click **Restart now** (or simply restart the program later).

The language is saved. It is also used for the messages of the datapack (in-game chat) and the description of the resource pack generated afterwards.

Official Minecraft sounds

Usually nothing to do: the software uses the sounds of your Minecraft, or downloads them itself from Mojang's official servers (see step 1). This section shows the version used and lets you:

- **Download now** — start the download again (after an internet cut, for example);
- **Delete the downloaded files** — free about 41 MB (they will be downloaded again when needed);
- untick the **automatic download** if you prefer to use only your Minecraft installation.

Sound and game sources

- **Note Block Studio sounds (optional)** — only to add its custom sounds to the full edition. Usually detected automatically (`…\Minecraft Note Block Studio\Data\Sounds`); if not, **Browse…**.
- **Minecraft folder** — leave it on *Automatic* if you use the official launcher. Modrinth, CurseForge and Prism Launcher instances are found by themselves.
- **Added instances** — only if your game folder is somewhere unusual: click **Add…** and choose the folder that contains `saves`.
- **World backups** — where the ZIP backups made before installing are stored.

Timeline and audio

- The **colours** of the timeline (blue = silence, green = notes playing) can be changed.
- **Audio output** and **Preview volume** only affect the preview inside the software, not the game.

Next guide: choose your world.
