Step 3 — Choose a world (wizard step 1)

Goal: pick the Minecraft world where the music structure will be placed.

1. On the **Home** page, click **New project**. The **Wizard** opens on step 1, *World*.
2. The list shows every world found (official launcher, Modrinth, CurseForge, Prism). A world you create while the program is open appears by itself; **Refresh the list** forces a new search.
3. Click a world: its version, game mode, commands and folder are shown below.
4. Click **Use this world**.

Choosing a world

Good to know

- **Commands must be allowed** in the world (the music is controlled with `/function`). If they are not: in game, *Open to LAN → Allow commands*, or use a server.
- **Close the world in Minecraft** before installing the music (step 10). The software checks it.
- **Create a ZIP backup…** copies the whole world into your backup folder without changing it. A backup is also offered automatically before any installation.
- Nothing is written into the world at this step.

Next guide: import your MIDI file.
